Northstar Data Retention Standard

Revision 1 | Fictional demonstration material

Purpose

This standard describes routine retention periods for the fictional Northstar Field Services environment.

Operational backups

Daily operational backups are retained for 30 days. A restore request must identify the target service, requested recovery point, and approving service owner.

Customer archives

Customer archives are retained for 365 days unless a signed customer agreement specifies a different period. Legal holds override routine deletion schedules and require review by the records owner.

Deletion

At the end of the applicable retention period, the storage owner schedules deletion and records completion in the service change log.

Synthetic demo content. Not a real policy or operational instruction.
